

REMARKS

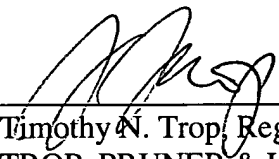

The claims have been amended to specify the receipt of a message and instruction for subsequent transmission in a wireless communication network, storage of the message and the instruction on the network, and transmitting the message from the network at the predetermined time. Support for the limitation can be found at page 10, lines 4-7. There it is indicated that the wireless network may store or queue the message in the memory until the time and/or date specified by the user is met.

None of the cited references suggest storing the message for subsequent transmission on the wireless network. Instead, they all implement the policy from the wireless device. But this requires that the wireless device be active and precludes using the network to implement the function when the wireless device is not active or powered up at the required time.

Therefore, reconsideration is respectfully requested.

Respectfully submitted,

Date: July 18, 2008
